

Anywhere Wx/XP v1.93 Build 134 Release Notes

This release fixes the following issues in Anywhere Map:

- Some XM receivers would not save the activation data when AnywhereMap instructed the radio to do so.
- Fixed issue with AWM/XP saying that a weather type was corrupt if it shutdown properly while decoding a weather data file. (It would erroneously detect this as a crash).

Special instructions for new WxWorx dual ensemble or Bluetooth SPP (serial port profile) receivers:

The weather radio must have been paired prior to this step. (Note: The bluetooth pairing passkey for the new XM WxWorx Receiver is 9679)

When you connect to one of these receivers, the Bluetooth manager screen will pop open. To permanently prevent this screen from popping up again, check the option “Always use the selected device” BEFORE tapping the “WxRadio” icon.
